JOB REFERENCE: NLP ENGINEER

I am thrilled to apply for the NLP Engineer position at AiTech, as advertised. With a solid background in backend web development, coupled with over two years of specialized experience in data science within the banking sector, I have developed a deep understanding of Natural Language Processing (NLP) and machine learning. My role as a teaching assistant at the American University in Cairo has also provided me with a unique perspective on AI education and research.

At Data Gear, I led the development of AI models aimed at predicting transaction volumes for various banking services. This experience honed my skills in working with large datasets and deploying sophisticated machine learning models, including generative AI. I am particularly excited about AiTech's focus on leveraging cutting-edge technologies, such as Large Language Models (LLM), to solve complex business problems.

The opportunity to work at AiTech, based in the vibrant and rapidly developing environment of Saudi Arabia, is particularly appealing. I am eager to contribute to innovative projects that not only push the boundaries of AI but also play a significant role in enhancing the infrastructure and business landscape in the region.

Thank you for considering my application. I have attached my resume for your review and would welcome the opportunity to discuss my qualifications in more detail.
Sincerely,

Omar Wael
